

KWC

Swiss Water Experience

KWC
ZOE
touch light PRO

KWC ZOE touch light PRO is a faucet controlled using smart technology. It responds intuitively to a brief touch and is extremely easy to programme to suit your personal habits and needs. The round operating unit also features a light ring, which indicates the water temperature selected – so you can be sure that you have everything under control!

Touch and refresh – 1x touch

Cold water = blue. For pouring yourself a quick drink of water, washing a piece of fruit or preparing a salad: what you need and use most at the sink is available at your fingertips and accessible with minimal effort.

Touch and clean – 2x touch

Warm water = orange. For briefly washing your hands, giving a plate a quick rinse or filling small saucepans: the 2x – warm water setting is designed for all those occasional jobs where cleanliness is key.

Touch and prepare – 3x touch

Hot water = red. For filling the kettle or a pan of spaghetti, or washing roasting tins and baking trays: hot water is available in no time at all – yet safety always comes first. Tapping three times to get hot water not only provides protection when children are around, it also means that hot water is used in a more conscious way, which can help to save energy.

Design and sustainability

Fascinating design meets smart technology, aesthetic appeal meets functionality. With every turn, this faucet is transformed into a work of sculptural art, and every time you use it, you will appreciate the benefits and convenience it offers even more. Every individual adjustment helps save energy and water.

One way or another

Just one press of the diverter button on the shower head is all it takes to switch from a full Neoperl® spray to a fine needle spray.

On and off

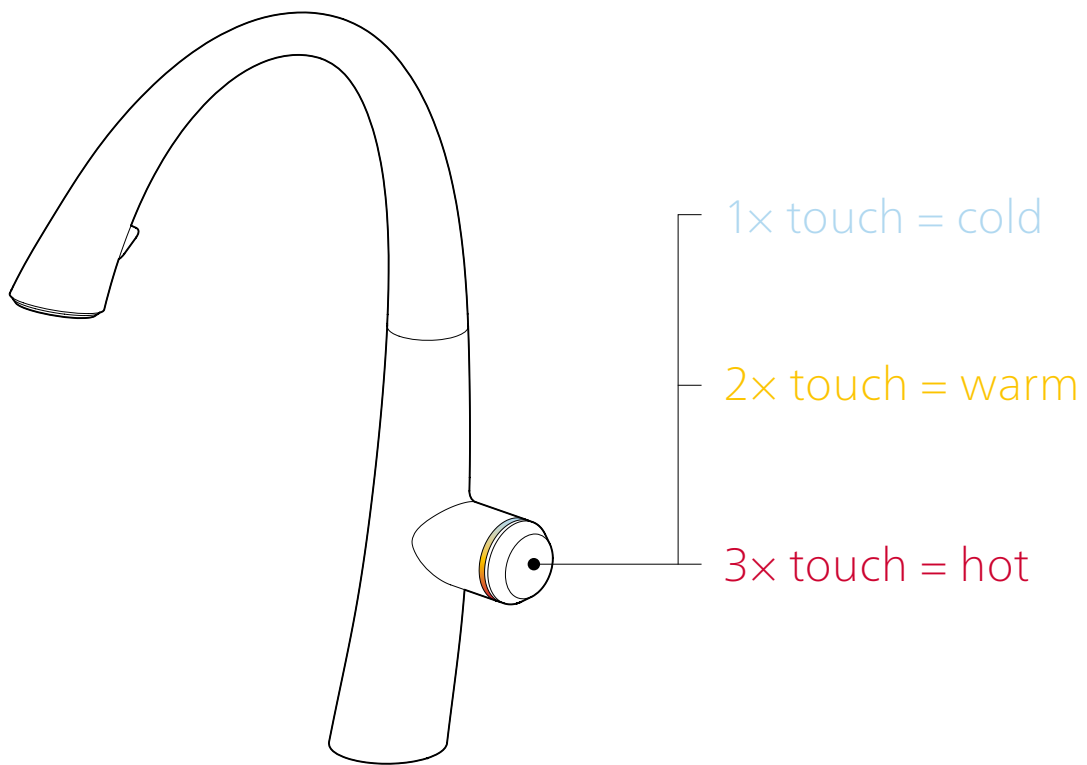

A touch of a button is all it takes for luminaqua® to transform the jet of water from your faucet into a wonderful play of light. The light switches off automatically after 30 minutes.

Style & High-Tech

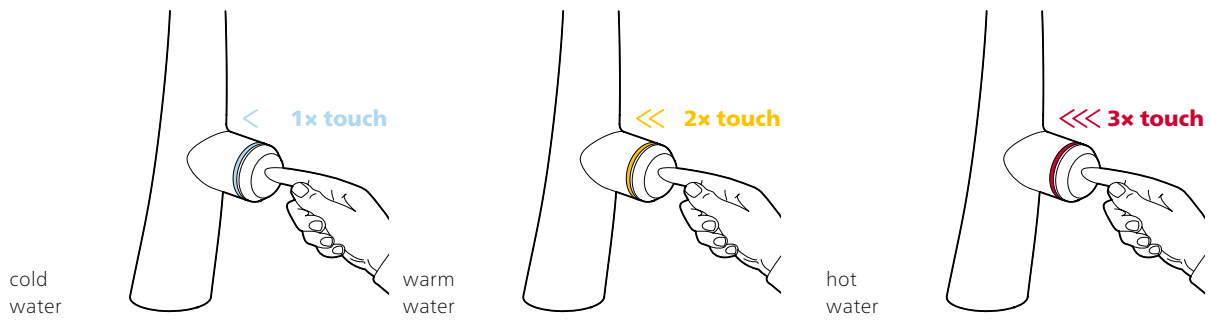

Innovative operation

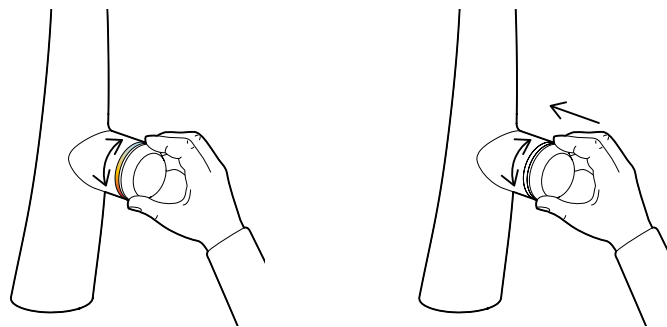

Intelligent details, tried-and-tested technology and precise functionality ensure safety and prevent any unpleasant surprises. The faucet is incredibly easy to use – even if you already have your hands full. Everything is designed to provide maximum convenience and meet individual user requirements, while saving energy and water in the process.

1x – 2x – 3x

Tapping the operating button starts the pre-set programme. A simple touch is all it takes to switch the flow of water off.

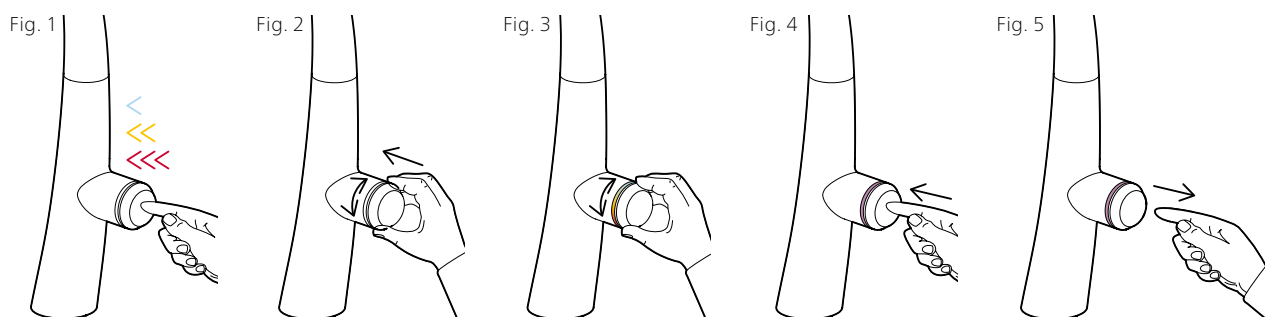

Controlling the temperature

Turning the operating button adjusts the temperature, while the light rings indicate the temperature zones.

Controlling the flow

Turning and pushing the operating button controls the flow. The bevelled edge of the operating button provides the ideal gripping surface for controlling the flow with perfect precision.

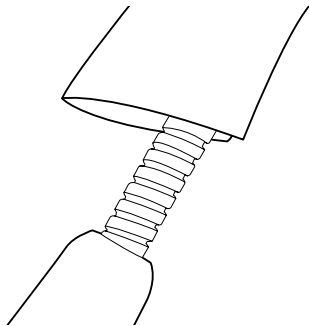

Customise the settings

Choose the desired position (1x – 2x – 3x, Fig. 1). Set your preferred flow rate (push and turn, Fig. 2) and temperature

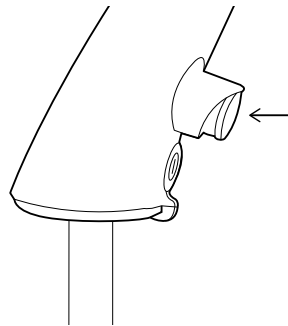

(turn, Fig. 3), then release the button. Push and hold the button until the light ring glows purple (Fig. 4).

Release the button – your settings have been saved (this will be confirmed by the light ring flashing twice, Fig. 5).

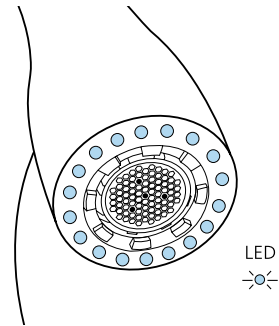

Pull-out spray

The spray is seamlessly integrated into the spout and can be extended up to 50 cm. A high-quality metallic casing extends the service life of the pull-out hose.

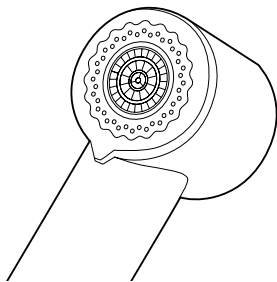

Diverter

Just one press of the diverter button on the shower head is all it takes to switch from a full Neoperl® spray to a fine needle spray.

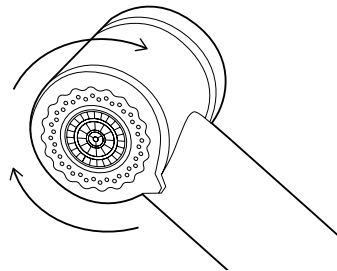

luminaqua®

To create the right atmosphere in your kitchen, you can activate the luminaqua® play of light whenever the mood strikes you. The light ring is integrated into the pull-out aerator, making it seem invisible, while the LEDs have a very long lifespan but use very little electricity.

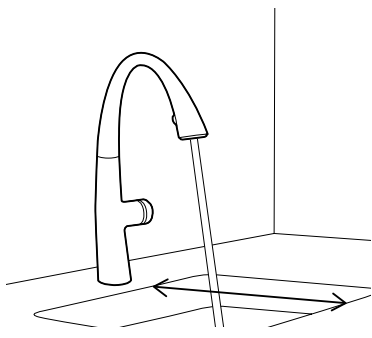

jetclean

The jetclean faceplate prevents limescale from building up on your kitchen spray and does some of your cleaning work for you. When water is flowing, the cone-shaped holes on the faceplate expand, dislodging any stubborn limescale deposits. The holes go back to their normal size when the water flow is switched off.

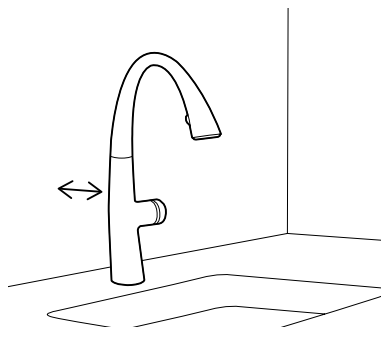

turn and clean (tac)

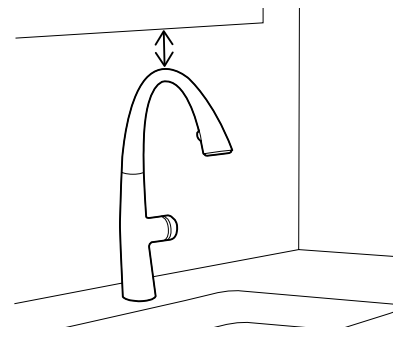

If limescale deposits build up on the faceplate of your faucet, the turn and clean fastening mechanism will come to your aid: simply turn, clean and the job is done.

For an angled spray of water, the size of the basin must be factored in.

When installing faucets, the distance from the wall must be taken into account. Distance between wall and centre of mounting hole: at least 42 mm.

Windows / wall units need to be taken into account.

with luminaqua® LED-technology

Electronic controlled

- touch light PRO technology
- touch'n'flow 1-2-3
 - 3 preset temperatures and flow rates
- position of control unit only possible on the right side
- duration of water flow - safety indication:
 - switch off automatically after 10 minutes
 - temperature limit can be adjusted
 - hot water disinfection (5 minutes) can be adjusted

- Covered pull-out spray
 - ergonomic spout alignment, shape and handling
- KWC-jetclean-technology
- automatic diverter reset
- integrated ON/OFF push-button with automatic shut-off after 30 minutes
- up to 500 mm pull-out length
- hose surface to fit faucet surface
- hose guide, swivelling 270°

Flow rate normal spray 9 l/min (3 bar)
Flow rate needle spray 10 l/min (3 bar)

Models

KWC ZOE is also available as a lever mixer with an integrated pull-out spray, bringing a whole new level of functionality to the kitchen. The flow rate and water temperature can be controlled intuitively using the short, pleasantly tactile lever. KWC ZOE particularly proves its worth in households where small children are around. Cold water flows when the lever is pointing forward and mixed water runs when it is in the central position, keeping guests of all ages safe from scalding in the kitchen.
